Oxford University Press, 2018; Transparency in International Investment Arbitration (A Guide to the UNCITRAL Standard on Transparency in Treaty-Based Investor-State Arbitration) (co-editor), Cambridge ...

The provisions of the French Civil Code governing the law of obligations have remained largely unchanged since 1804 and have served as the model for civil codes across the world. In 2016, the French Government effected major reforms of the provisions on the law of contract, the general regime of obligations and proof of obligations. This work explores in detail the most interesting new provisions on French contract law in a series of essays by French lawyers and comparative lawyers working on French law and other civil law systems. It will make these fundamental reforms accessible to an English-speaking audience.

Conceptualising Property Law offers a transsystemic and integrated approach to common law and civil law property. Property law has traditionally been excluded from comparative law analysis, common law and civil law property being deemed irreconcilable. With this book, Ya'll Emerich aims to dispel the myth that comparison between these two systems of property is impossible. By establishing a dialogue between common law and civil law property, it becomes clear that the two legal traditions share common ground in the way that they address legal, cultural, and social issues related to property and wealth.

Comparative Corporate Governance considers the effects of globalization on corporate governance issues and highlights how, despite these widespread consequences, predictions of legal convergence have not come true. By adopting a comparative legal approach, this book explores the disparity between convergence attempts and the persistence of local models of governance in the US, Europe and Asia.

Maritime Cross-Border Insolvency is a comprehensive comparative examination of both insolvency regimes (UNCITRAL and EU) in shipping with reference to the main jurisdictions having adopted the UNCITRAL regime, i.e. USA, UK, Greece.

Economic sanctions are instruments of foreign policy. However, they can also affect legal relations between private parties – principally in contract. In such cases, the court or arbitration tribunal seized must decide whether to give effect to the economic sanction in question. Private international law functions as a 'filter', transmitting economic sanctions that originate in public law to the realm of private law. The aim of this book is to examine how private international law rules can influence the enforcement of economic sanctions and their related foreign policy objectives. A coherent EU foreign policy position – in addition to promoting legal certainty and predictability – would presuppose a uniform approach not only concerning the economic sanctions of the EU, but also with regard to the restrictive measures imposed by third countries. However, if we examine in detail the application of economic sanctions by Member States' courts and arbitral tribunals, we find a somewhat different picture. This book argues that this can be explained in part by the divergence of private international law approaches in the Member States.

Have you ever been frustrated that arbitration folk aren't more numerate? The Guide to Damages in International Arbitration is a desktop reference work for those who'd like greater confidence when dealing with the numbers. This second edition builds upon last year's by updating and adding several new chapters on the function and role of damages experts, the applicable valuation approach, country risk premium, and damages in gas and electricity arbitrations. This edition covers all aspects of damages - from the legal principles applicable, to the main valuation techniques and their mechanics, to industry-specific questions, and topics such as tax and currency. It is designed to help all participants in the international arbitration community to discuss damages issues more effectively and communicate them better to tribunals, with the aim of producing better awards. The book is split into four parts: Part I - Legal Principles Applicable to the Award of Damages; Part II - Procedural Issues and the Use of Damages Experts; Part III - Approaches and Methods for the Assessment and Quantification of Damages; Part IV - Industry-Specific Damages Issues

Arbitration is the normal and preferred mode for resolving international commercial disputes. It presents an essential advantage over national courts by offering neutrality of adjudication, but is currently only available where both parties have consented to it. This innovative book proposes a fundamental rethink of this assumption and argues that arbitration should become the default mode of resolution in international commercial disputes.

This book provides a comparative perspective on one of the most intriguing developments in law: the influence of basic rights and human rights in private law. It analyzes the application of basic rights and human rights, which are traditionally understood as public law rights, in private law, and discusses the related spillover effects and changing perspectives in legal doctrine and practice. It provides examples where basic rights and human rights influence judicial reasoning and lead to changes of legislation in contract law, tort law, property law, family law, and copyright law. Providing both context and background analysis for any critical examination of the horizontal effect of fundamental rights in private law, the book contributes to the current debate on an important issue that deserves the attention of legal practitioners, scholars, judges and others involved in the developments in a variety of the world's jurisdictions. This book is based on the General Report and national reports commissioned by the International Academy of Comparative Law and written for the XIXth International Congress of Comparative Law in Vienna, Austria, in the summer of 2014.

This book examines different legal systems and analyses how the judge in each of them performs a meaningful review of the proportional use of discretionary powers by public bodies. Although the proportionality test is not equally deep-rooted in the literature and case-law of France, Germany, the Netherlands and the United Kingdom, this principle has assumed an increasing importance partly due to the influence of the European Court of Justice and European Court of Human Rights. In the United States, different standards of judicial review are applied to review 'arbitrary and capricious' agency discretion. However, do US judges achieve a similar result to the proportionality or reasonableness test? Drawing together a selection of key experts in the field, this book analyses the principle of proportionality in the judicial review of administrative decisions from different perspectives. The principle is first examined in the context of recent developments in the literature and case-law, including the inevitable EU influence, then light shall be shed on the meaning of this principle in the specific case-law of the European Court of Justice and European Court of Human Rights. Finally, the authors go on to explore the ways in which US judges consciously 'sanction' the 'disproportionate' and/or 'unreasonable' use of agency discretion. In the legal systems where the proportionality test plays a very limited role, Ranchordás and de Waard also try to clarify why this is the case and look at what alternative solutions have been found. This book will be of great interest to scholars of public and administrative law, and EU law.

Corporate social responsibility (CSR) is setting new missions for companies and shining a welcome light on issues such as the behaviour of board members, shared value, the well-being of stakeholders, the protection of vulnerable individuals and the roles played by public opinion and shareholders. This timely book seeks to lay the foundations for a sustainable corporate governance based on the European Commission definition of CSR as 'the responsibility of enterprises for their impacts on society'. More generally, this sustainable corporate governance responds to some of the pressing challenges of the 21st century, from sustainable finance and climate change to carbon reduction and population growth.
