This volume reviews the preparation, structures, physicochemical properties and applications of graphite fluorides, mainly based on the results obtained by the authors. Their interest in graphite fluorides stemmed from research on the "anode effect", in electrolytic

production of fluorine gas in  $\text{KF} \cdot 2\text{HF}$  melt using carbon electrodes. The formation of a thin graphite fluoride film on carbon anodes made it difficult to continue the electrolysis of  $\text{KF} \cdot 2\text{HF}$  at a high current density. To elucidate this phenomenon studies on graphite fluoride were initiated. In the course of these systematic
