MENDELIAN GENETICS PROBLEMS AND ANSWERS. If the brown male had been BB, then all offspring would have been Bb and all brown. However, if the male is Bb as above and you perform a testcross, 50% of all offspring should have the bb genotype and a white phenotype.

### MENDELIAN GENETICS PROBLEMS AND ANSWERS

Two babies in a maternity ward have lost their identity bands, and there is some confusion about their footprint records. Baby #1 is type A; baby #2 is type B. If you are one of the mothers and your blood type is O, which one of the following statements applies. a.

### MENDELIAN GENETICS PROBLEMS - FSU Biology

Answer: Let R be the normal allele and r the allele that causes PKU. Parents 1 and 2 in generation I must both be carriers (Rr), because their daughter has the disease. In generation 2, the probability that siblings 2 and 4 are carriers is 2/3. (The genotypic ratios are 1:2:1, and we can eliminate the rr genotype from consideration).

### Practice questions in Mendelian genetics

ANSWER KEY Mendelian Genetics Problem Set 1: Basic Genetics Problems 1. In pea plants, yellow peas are dominant to green peas and purple flowers are dominant to white flowers. For each of the following parental crosses, give the predicted phenotypic and genotypic ratios of the F1 generation: 1.
