In *Media Hot and Cold* Nicole Starosielski examines the cultural dimensions of temperature to theorize the ways heat and cold can be used as a means of communication, subjugation, and control. Diving into the history of thermal media, from infrared cameras to thermostats to torture sweatboxes, Starosielski explores the many meanings and messages of temperature. During the twentieth century, heat and cold were broadcast through mass thermal media. Today, digital thermal media such as bodily air conditioners offer personalized forms of thermal communication and comfort. Although these new media promise to help mitigate the uneven effects of climate change, Starosielski shows how they can operate as a form of biopower by determining who has the ability to control their own thermal environment. In this way, thermal media can enact thermal violence in ways that reinforce racialized, colonial, gendered, and sexualized hierarchies. By outlining how the control of temperature reveals power relations, Starosielski offers a framework to better understand the dramatic transformations of hot and cold media in the twenty-first century.

This book offers the latest technology on HVAC Controls. While most industrial controls have benefited from advances in personal computer control and sensor technology, building controls have lagged behind. Only now are some of the techniques used in industrial automation showing up in HVAC. HVAC Controls, optimizing HVAC, boiler and pump control, heat pump and chiller optimization, environmental controls wireless control, computer control, and bulding automation. As energy costs continue to grow in relation to overall operating costs, the need for more refined HVAC control becomes more crucial. HVAC strategies such as optimizing start-up time and supply air temperature, and minimizing fan energy and reheating are not only possible, but are becoming necessary. This book examines the relationship between industrial automation techniques and evolving VHAC systems, and how emerging technologies can now be applied to HVAC systems.
