Money and banking are about money, payment systems, banking and the central bank in an economy. The information on money and banking enables economic agents to make a better financial decision in the economy. Money is an exchange for goods and services and to settle debts. There is a link between the money supply and the monetary base. The money supply will increase or decrease when the monetary base or the money multiplier increases or decreases. The value of money will deteriorate fast when inflation is high. A payment system is an arrangement for exchange, which can be categorised into store-of-value systems and account-based systems. Asymmetric information can lead to adverse selection and moral hazard problems and thus, the asymmetric information problem can trigger the financial crisis problem. Banks can be commercial banks, investment banks and Islamic banks. Banks pool savings, provide safekeeping,

accounting services and the payment systems, provide liquidity, diversify risk and provide financial information. Banking development is said to have a vital role in economic growth. Balance sheet management is important for the smooth running of the business of banks. Theory of term structure of interest rate attempts to explain the shape of the yield curve over time. Interest rate risk is a significant risk in the bank as a change in interest rate can affect both sides of the balance sheet of the bank. Financial innovation and bank consolidation are important issues in money and banking. The central bank manages monetary policy and oversees the financial system in an economy. The independence of the central bank can be a goal and operational independence. There are pro and con for the independence of the central bank and for the central bank to prick asset price bubble. This book can be divided into three main parts, namely money and the payment systems, banking and central bank. Chapter 1 to Chapter 2 explains money and the payment systems. Chapter 3 to Chapter 7 are banking. Chapter 8 is the central bank. Chapter 9 is concluding remarks. This book provides some fundamentals in money and banking for the economic agents, namely households, firms, governments and foreigners.

It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalfindex.

This report is intended to introduce readers to current developments in distributed ledger technology, or blockchain, with the vantage point of possible benefits to emerging markets. The first six chapters were written a year ago, while the last three are more recent and bring the perspective of a year of development in the nascent technology. Chapter 3 examines whether blockchain can be used to mitigate de-risking by financial institutions. Chapters 4 and 5 look more closely at the financial services sector, including an overview of how blockchain fits into the spectrum of financial technology (fintech) innovations and the resulting provision of financial services (Chapter 4), and an analysis of blockchain's contribution to reaching the unbanked and underbanked in various emerging markets, including in Latin America, Asia, and Sub-Saharan Africa (Chapter 5). Chapter 6 looks beyond fintech to explore how developments in applied blockchain technology can impact agribusiness, drug safety, and more generally provide enforcement tools to promote the reach of sustainable and inclusive business.
