Current and expanding human activities are moving us towards ever deeper unsustainability. While there is no single, simple means of reversing the invidious biophysical trends and redirecting the distribution of benefits, one necessary step is to approach every new and renewed undertaking as an opportunity to deliver maximum multiple, mutually reinforcing, fairly distributed and lasting gains. Finding the best options for enhancing such gains by comparing alternatives, addressing all the key requirements for progress towards sustainability and avoiding significant adverse effects, is the essential purpose of sustainability assessment. This book addresses the theory and practice of sustainability assessment applications, drawing from experiences globally in a variety of sectors and presenting lessons learned. Diverse international case studies from professionals and academics demonstrate progress so far in exploring openings, testing approaches to application and establishing best practice. The book illustrates means of specifying generic sustainability criteria for the context of particular applications, reports on the resulting insights, and examines the barriers and opportunities for further advances. This book is an important resource for students, academics and professionals in the areas of Governance, Environmental Assessment, Planning and Policy Making, Corporate Social Responsibility and Applied Sustainability.

In many schools and higher education institutions it has become common practice to share assessment criteria with students. Sometimes it is required for accountability purposes, at other times criteria are used as a means to communicate expectations to students. However, the idea that explicit assessment criteria should be shared with students has been contested. On the one hand, research has shown that explicit criteria may positively affect student performance, reduce their anxiety, as well as support students' use of self-regulated learning strategies. On the other hand, there are fears that explicit criteria may have a restraining influence on students' learning, as well as limiting their autonomy and creativity. There are also indications of students becoming more performance oriented, as opposed to learning oriented, when being provided with explicit assessment criteria. Taken together, it is not fully understood under which circumstances it is productive for student learning to share explicit assessment criteria, and under which circumstances it is not. In particular, empirical research on the proposed negative effects of sharing criteria with learners is limited and most fears voiced in the literature are based on individual experiences and anecdotal evidence. In this book, we therefore bring different perspectives on transparency in assessment together, in order to further our understanding of how students are influenced by the use of explicit assessment criteria. A deeper understanding of the influence of explicit assessment criteria on students' understanding of criteria, motivation, and learning is equally imperative for future research and educational practice, both of which need to go beyond individual opinions and convictions.
