To define a structure, you must use the struct statement. The struct statement defines a new data type, with more than one member. The format of the struct statement is as follows

```
struct  
[structure tag] {  
member definition;  
}
```

member definition; ...  
member definition; }  
[one or more structure variables]; The structure tag is optional and each member definition is a normal variable definition, such as int i; or float f; or any other valid variable definition. At the end of the structure's ...
