A food safety training and certification program, providing the latest information and tools for you to use every day. Staying aware of the food safety risks faced by your operation will help you keep your operation, your staff, and your customers safe.

Food safety awareness is at an all time high, new and emerging threats to the food supply are being recognized, and consumers are eating more and more meals prepared outside of the home. Accordingly, retail and foodservice establishments, as well as food producers at all levels of the food production chain, have a growing responsibility to ensure that proper food safety and sanitation practices are followed, thereby, safeguarding the health of their guests and customers. Achieving food safety success in this changing environment requires going beyond traditional training, testing, and inspectional approaches to managing risks. It requires a better understanding of organizational culture and the human dimensions of food safety. To improve the food safety performance of a retail or foodservice establishment, an organization with thousands of employees, or a local community, you must change the way people do things. You must change their behavior. In fact, simply put, food safety equals behavior. When viewed from these lenses, one of the most common contributing causes of food borne disease is unsafe behavior (such as improper hand washing, cross-contamination, or undercooking food). Thus, to improve food safety, we need to better integrate food science with behavioral science and use a systems-based approach to managing food safety risk. The importance of organizational culture, human behavior, and systems thinking is well documented in the occupational safety and health fields. However, significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety.

Food safety is an essential part of any food service or retail operation. Understanding the risks and ways to prevent foodborne illness will protect customers and businesses from harm. The person-in-charge of a food service or retail establishment must know how and what food safety practices to monitor. This manual is written to provide the person-in-charge of a food service or retail establishment the knowledge and skills that they will need to keep food safe. Learning and applying food safety practices protects customers and businesses. This course is designed for every food service or retail operation. The manual is divided into three sections: Section 1 - Foundations of Food Safety: The person-in-charge will study an overview of the regulations, food safety basics, microorganisms, and core food safety features. This section will build the foundation that a person-in-charge will need in order to apply food safety practices. Section 2 - Addressing the Five CDC Risk Factors: The Centers for Disease Control and Prevention (CDC) has identified the five most common causes of foodborne illness. The person-in-charge will learn how to address these issues and control these risk factors in order to be able to serve and sell safe food in their operation. Section 3 - Proactive Food Safety System: Once a food safety foundation is built and the risk factors have been addressed, a food safety management system can be applied. Hazard

Analysis and Critical Control Point (HACCP) is a proactive system that assesses the food safety hazards in an operation and identifies ways to prevent, eliminate, or reduce each hazard to a safe level. The person-in-charge will learn to apply the seven HACCP principles in their operation. Upon completion of the SURE Food Safety Manager Manual, participants will have the knowledge to safely serve and sell food to their customers. Participants will also be prepared to take an ANSI-accredited Food Protection Manager Examination.

Each book comes with a nutritional software CD-ROM that enables readers to create recipes, modify recipes, and analyze the nutritional content of recipes. Chefs, restaurateurs, dietitians, and other foodservice professionals will find this book an invaluable reference and guide to meeting the nutritional needs of all their customers.

This handbook provides basic facts regarding foodborne pathogenic microorganisms and natural toxins.

Over the past 20 years, public concerns have grown in response to the apparent rising prevalence of food allergy and related atopic conditions, such as eczema. Although evidence on the true prevalence of food allergy is complicated by insufficient or inconsistent data and studies with variable methodologies, many health care experts who care for patients agree that a real increase in food allergy has occurred and that it is unlikely to be due simply to an increase in awareness and better tools for diagnosis. Many stakeholders are concerned about these increases, including the general public, policy makers, regulatory agencies, the food industry, scientists, clinicians, and especially families of children and young people suffering from food allergy. At the present time, however, despite a mounting body of data on the prevalence, health consequences, and associated costs of food allergy, this chronic disease has not garnered the level of societal attention that it warrants. Moreover, for patients and families at risk, recommendations and guidelines have not been clear about preventing exposure or the onset of reactions or for managing this disease. Finding a Path to Safety in Food Allergy examines critical issues related to food allergy, including the prevalence and severity of food allergy and its impact on affected individuals, families, and communities; and current understanding of food allergy as a disease, and in diagnostics, treatments, prevention, and public policy. This report seeks to: clarify the nature of the disease, its causes, and its current management; highlight gaps in knowledge; encourage the implementation of management tools at many levels and among many stakeholders; and delineate a roadmap to safety for those who have, or are at risk of developing, food allergy, as well as for others in society who are responsible for public health.
