and Statistics ...

Probability is starting with an animal, and
figuring out what footprints it will make.
Statistics is seeing a footprint, and
guessing the animal. Probability is
straightforward: you have the bear.

Read Book Introduction To Probability And Statistics

Measure the foot size, the leg length, and you can deduce the footprints.

A probability of one represents certainty: if you flip a coin, the probability you'll get heads or tails is one (assuming it can't land on the rim, fall into a black hole, or some such). The probability of getting a given number of heads from four flips is, then, simply the number of ways that number of heads can occur, divided by the number of
