This book deals with the management and valuation of energy storage in electric power grids, highlighting the interest of storage systems in grid applications and developing management methodologies based on artificial intelligence tools. The authors highlight the importance of storing electrical energy, in the context of sustainable development, in "smart cities" and "smart transportation", and discuss multiple services that storing electrical energy can bring. Methodological tools are provided to build an energy management system storage following a generic approach. These tools are based on causal formalisms, artificial intelligence and explicit optimization techniques and are presented throughout the book in connection with concrete case studies.

Many would argue that the 1980s were a better time for truck drivers than nowadays: there were no cell phones, there was less traffic on the road, CB radio was all the rage, and stickers were the simple heart of truck customizing. However, the transport industry is constantly evolving and companies must adapt their vehicles to keep pace with the developments. As a result, vehicle design and liveries regularly change. Many of the companies around in the 1980s have expired and been forgotten. Most of the trucks from that time are long gone to the great scrapyards in the sky! David Wakefield has been working in the transport industry for over 30 years and has been taking photographs of trucks since the early 1980s. He has amassed thousands of high-quality images, producing one of the most comprehensive photographic collections of the time, but many of his photographs have never been previously published. In this vivid compilation, Nick Ireland has collated 300 of David's images from the 1980s in order to preserve them and make them publicly available for the first time. The book features trucks from all over the world, and it is a must-have for current and former truckers who will enjoy being reminded of 'the good old days, ' as well as anyone else with an interest in transport history.
