Supplementary Exercises*: Topological Groups: Problem 4 Solution Working problems is a crucial part of learning mathematics. No one can learn topology merely by poring over the definitions, theorems, and examples that are worked out in the text. One must work part of it out for oneself. To provide that opportunity is the purpose of the exercises.

Munkres § 34 Ex. 34.1. We are looking for a non-regular Hausdorff space. By Example 1 p. 197, RK [p. 82] is such a space. Indeed, RK is Hausdorff for the topology is finer than the standard topology [Lemma 13.4]. RK is 2nd countable for the sets (a, b) and (a, b) − K, where the intervals have rational end-points, constitute a countable basis.

Ordered Normal (in the order topology) The product of two ordered (even well-ordered) spaces need **NOT** be normal: is not normal. Well-ordered: (a,b]=(a,b+1) are open and form a basis, cover each closed set with such intervals that do not intersect the other set. General case (ordered): covered, for example, in Steen, Seebach, Counterexample 39, 1-6.
