posed a profound question: 'What is life, and how did it emerge from non-life?'

This problem has puzzled biologists and physical scientists ever since. Living things are hugely complex and have unique

properties, such as self-maintenance and apparently purposeful behaviour which we do not see in inert matter. So how does chemistry give rise to biology? What could have led the first replicating

such a path?

Now,

developments in
the emerging
field of
'systems
chemistry' are
unlocking the
problem. Addy
Pross shows how
the different
kind of
stability that

operates among replicating molecules results in a tendency for chemical systems to become more complex and acquire the properties of life.

Strikingly, he demonstrates that Darwinian
