The author examines historical and contemporary examples of military involvement in counterterrorism, outlining the specific roles which the armed forces of liberal democracies have performed in combating terrorism, both in a domestic and international context. He describes the political, strategic, conceptual, diplomatic, and ethical problems that can arise when a state's armed forces become engaged in counterterrorism, and argues that military power can only be employed as part of a coordinated counterterrorist strategy aimed at the containment and frustration -- rather than the physical elimination -- of the terrorist group(s) concerned.

Collectively, mankind has never had it so good despite periodic economic crises of which the current sub-prime crisis is merely the latest example. Much of this success is attributable to the increasing efficiency of the world's financial institutions as finance has proved to be one of the most important causal factors in economic performance. In a series of insightful essays, financial and economic historians examine how financial innovations from the seventeenth century to the present have continually challenged established institutional arrangements, forcing change and adaptation by governments, financial intermediaries, and financial markets. Where these have been successful, wealth creation and growth have followed. When they failed, growth slowed and sometimes economic decline has followed. These essays illustrate the difficulties of co-ordinating financial innovations in order to sustain their benefits for the wider economy, a theme that will be of interest to policy makers as well as economic historians.

Banana root deterioration and impacts on production; Root anatomy and morphology; Root physiology; Soils and root development; Pathogen: root system interactions.

This open access book examines more than two centuries of societal development using novel historical and statistical approaches. It applies the well-being monitor developed by Statistics Netherlands that has been endorsed by a significant part of the international, statistical community. It features The Netherlands as a case study, which is an especially interesting example; although it was one of the world's richest countries around 1850, extreme poverty and inequality were significant problems of well-being at the time. Monitors of 1850, 1910, 1970 and 2015 depict the changes in three dimensions of well-being: the quality of life 'here and now', 'later' and 'elsewhere'. The analysis of two centuries shows the solutions to the extreme poverty problem and the appearance of new sustainability problems, especially in domestic and foreign ecological systems. The study also reveals the importance of natural capital: soil, air, water and subsoil resources, showing their relation with the social structure of the 'here and now'. Treatment and trade of natural resources also impacted on the quality of life 'later' and 'elsewhere.' Further, the book illustrates the role of natural capital by dividing the capital into three types of raw materials and concomitant material flows: bio-raw materials, mineral and fossil subsoil resources. Additionally, the analysis of the institutional context identifies the key roles of social groups in well-being development. The book ends with an assessment of the solutions and barriers offered by the historical anchoring of the well-being and sustainability issues. This unique analysis of well-being and sustainability and its institutional analysis appeals to historians, statisticians and policy makers.

This work compiles data and qualitative evidence on how local actions for integration, across a number of sectors, are being designed and implemented by the City of Amsterdam and its partners within a multi-level governance framework.

The Global Assessment Report on Disaster Risk Reduction (GAR) is the flagship report of the United Nations on worldwide efforts to reduce disaster risk. The GAR is published biennially by the UN Office for Disaster Risk Reduction (UNDRR), and is the product of the contributions of nations, public and private risk-related science and research, amongst others. The GAR contributes to achieving the Sendai Framework for Disaster Risk Reduction and the 2030 Agenda for Sustainable Development through monitoring risk patterns and trends, as well as progress in disaster risk reduction, while providing strategic policy guidance to countries and the international community. The GAR aims to focus international attention on the issue of risk and encourage political and economic support for risk reduction.

Campesino a Campesino tells the inspiring story of a true grassroots movement: poor peasant farmers teaching one another how to protect their environment while still earning a living. The first book in English about the farmer-led sustainable agriculture movement in Latin America, Campesino a Campesino includes lots of first-person stories and commentary from the farmer-teachers, mixing personal accounts with detailed analysis of the political, socioeconomic, and ecological factors that galvanized the movement. Campesino farmer leading a farmer to farmer training session in Mexico by Eric Holt-Gimenez Many years ago, author Eric Holt-Gimenez was a volunteer trying to teach sustainable agriculture techniques in the dusty highlands of central Mexico, with little success. Near the end of his tenure, he invited a group of visiting Guatemalan farmers to teach a course in his village. What he saw was like nothing he had known. The Guatemalans used parables, stories, and humor to present agricultural improvement to their Mexican compadres as a logical outcome of clear thinking and compassion; love of farming, of family, of nature, and of community. Rather than try to convince the Mexicans of their innovations, they insisted they experiment new things on a small scale first to see how well they worked. And they saw themselves as students, respecting the Mexicans' deep, lifelong knowledge of their own particular land and climate. All they asked in return was that the Mexicans turn around and share their new knowledge with others--which they did. CAC campo3\_photo by Food First This exchange was typical of a grassroots movement called Campesino a Campesino, or Farmer to Farmer, which has grown up in southern Mexico and war-torn Central America over the last three decades. In the book Campesino a Campesino, Holt-Gimenez writes the first history of the movement, describing the social, political, economic, and

environmental circumstances that shape it. The voices and stories of dozens of farmers in the movement are captured, bringing to vivid life this hopeful story of peasant farmers helping one another to farm sustainably, protecting their land, their environment, and their families' future.

This book questions the correctness of these assumptions and aims for further study of them. This is done by disentangling and illuminating the different elements underlying the interrelationship between the Court and the national courts. The objective is to distinguish between the requirements set by the Court; the constitutional powers and competences of national courts to interpret and apply international law, in particular the Convention; the way in which these courts actually use these competences to deal with the Court's interpretative approaches; and the type of criticism that is levelled at the Court's case-law. These elements are studied from the perspective of the Court as well as from a national perspective, in particular for Belgium, France, Germany, the Netherlands, Sweden and the United Kingdom. Analysing these elements separately enables a fruitful assessment of their interrelationship and provides a sound basis for a constructive debate on the implementation of the Convention in national law, which is based on solid constitutional foundations rather than assumptions and intuitions. The current book is therefore of great interest to those who are interested in debates on the interrelationship between the Court and the states - scholars, as well as judges, policy makers and politicians - but also to those who take a more general interest in constitutional implementation mechanisms, judicial powers and judicial argumentation.
