produce a unique and global guide to the core topics in the field. Each chapter includes coverage of the key thinkers, topic areas, events, and ideas that have shaped the field, but also takes the reader beyond typical textbook material and into engagement with current issues, cutting-edge research and future directions in the field of educational psychology from an international perspective. With over 30 chapters, the volume is divided into four themed sections: 'An introduction to educational psychology', 'How children learn and develop', 'Issues concerning the assessment of children' and 'Identifying and meeting the needs of children with learning difficulties'. Covering the key issues and fundamental strands of educational psychology The Routledge International Companion to Educational Psychology aims to provide the reader with knowledge of: educational psychology (history, child rights, and practice); factors which influence children's learning and development; issues to do with assessment (a key aspect of educational psychology); special educational needs (identification and how to meet their needs); the key thinkers, events, and ideas that have shaped the field; the core topics across educational psychology in an accessible manner; cutting edge research including recent research evidence and theory; future directions in the field of educational psychology; educational psychology from an international perspective. The book is conceived for both student and researcher use, and considers the implications for educational psychology practice in all sections. It will be highly beneficial for both students and lecturers on Education Studies and Psychology undergraduate courses, as well as combined undergraduate degrees .

The work summarizes theoretical and experimental investigations of real loading conditions of thin-walled plated and shell structures under loads concentrated on parts of their surface. There are presented more accurate and improved models of strain or stress distribution under patch loads considering geometrical and material nonlinearity in connection with stability problems and fatigue damage of studied structural types. The results of these investigations are of particular importance in the design and safety verification of many engineering structures, e.g. plate girders subjected to partial edge loading, closures of fuel tanks, footings and saddles of pressure vessels, reservoirs and pipelines.

In this volume a number of developments on a variety of topics have been reported. These topics include: partially saturated soil; instabilities in soil behaviour; environmental geomechanics; parallel computing; and applications to tunnels, embankments, slopes, foundations and anchors.

This proceedings volume for the 4th international conference CIGOS 2017 (Congrès International de Géotechnique - Ouvrages - Structures) presents novel technologies, solutions and research advances, making it an excellent guide in civil engineering for researchers, students, and professional engineers alike. Since 2010, CIGOS has become a vital forum for international scientific exchange on civil engineering. It aims to promote beneficial economic partnerships and technology exchanges between enterprises, worldwide institutions and universities. Following the success of the last three CIGOS conferences (2010, 2013 and 2015), the 4th conference was held at Ho Chi Minh City University of Technology, Ho Chi Minh City (Saigon), Vietnam on 26 to 27 October 2017. The main scientific themes of CIGOS 2017 were focused on 'New Challenges in Civil Engineering'.

The behaviour of steel structures and the criteria used in their design are set out in detail in this book. The book bridges the gap between the methods of analysis and the sizing of structural components. The basis of the limit state design criteria of the latest Australian code for structural steel are explained, and the reader is pointed to the relevant provisions of the code.

Declarative languages have traditionally been regarded by the mainstream computing community as too impractical to be put to practical use. At the same time, traditional conferences devoted to declarative languages do not have issues related to practice as their central focus. Thus, there are few forums devoted to discussion of practical aspects and implications of newly discovered results and techniques related to declarative languages. The goal of the First International Workshop on Practical Aspects of Declarative Languages (PADL) is to bring together researchers, practitioners and implementors of declarative languages to discuss practical issues and practical implications of their research results. The workshop was held in San Antonio, Texas, during January 18-19, 1999. This volume contains its proceedings. Fifty three papers were submitted in response to the call for papers. These papers were written by authors belonging to twenty one countries from six continents. Each paper was assigned to at least two referees for reviewing. Twenty four papers were finally selected for presentation at the workshop. Many good papers could not be included due to the limited duration of the workshop. The workshop included invited talks by Mark Hayden of DEC/Compaq Systems - search Center, speaking on 'Experiences Building Distributed Systems in ML,' and Mark Wallace of Imperial College Center for Planning And Resource Control (IC-PARC), speaking on 'ECLiPSe: Declarative Specification and Scalable Implementation.'
