The term "Peak Oil" was born in January 2001 when Colin Campbell formed the Association for the Study of Peak Oil & Gas (ASPO). Now, Peak Oil is used thousands of times a day by journalists, politicians, industry leaders, economists, scientists and countless others around the globe. Peak Oil is not the end of oil but it tells us the end is in sight.

Anyone interested in food production, economic growth, climate change or global security needs to understand this new

reality. In *Peeking at Peak Oil* Professor Kjell Aleklett, President of ASPO International and head of the world's leading research group on Peak Oil, describes the decade-long journey of Peak Oil from extremist fringe theory to today's accepted fact: Global oil production is entering terminal decline. He explains everything you need to know about Peak Oil and its world-changing consequences from an insider's perspective. In simple steps, Kjell tells us how oil is formed, discovered and produced. He uses science to reveal the errors and deceit of national and international oil

authorities, companies and governments too terrified to admit the truth. He describes his personal involvement in the intrigues of the past decade. What happens when a handful of giant oil fields containing two thirds of our planet's oil become depleted? Will major oil consumers such as the EU and US face rationing within a decade? Will oil producing nations conserve their own oil when they realize that no one can export oil to them in the future? Does Peak Oil mean Peak Economic Growth? If you want to know the real story about energy today and what the future has in store, then you need to be "Peeking at Peak

Oil”.

What do subprime mortgages, Atlantic salmon dinners, SUVs and globalization have in common? They all depend on cheap oil. And in a world of dwindling oil supplies and steadily mounting demand around the world, there is no such thing as cheap oil. Oil might be less expensive in the middle of a recession, but it will never be cheap again. Take away cheap oil, and the global economy is getting the shock of its life. From the ageing oilfields of Saudi Arabia and the United States to the Canadian tar sands, from

the shopping malls of Dubai to the shuttered auto plants of North America and Europe, from the made-in-China products on the shelves of the Wal-Mart down the road to the collapse of Wall Street giants, everything is connected to the price of oil Interest rates, carbon trading, inflation, farmers' markets and the wave of trade protectionism washing up all over the world in the wake of various economic stimulus and bailout packages - they all hinge on the new realities of a world where demand for oil eventually outstrips supply. According to maverick economist Jeff Rubin, there will be no energy bailout. The

global economy has suffered oil crises in the past, but this time around the rules have changed. And that means the future is not going to be a continuation of the past. For generations we have built wealth by burning more and more oil. Our cars, our homes, our whole world has been getting bigger in the cheap-oil era. Now it is about to get smaller. There will be winners as well as losers as the age of globalization comes to an end. The auto industry will never recover from this oil-induced recession, but other manufacturers will be opening up mothballed factories. Distance will soon cost money, and

11, 2001 were accomplished through an amazing orchestration of logistics and personnel. Crossing the Rubicon examines how such a conspiracy was possible through an interdisciplinary analysis of petroleum, geopolitics, narco-traffic, intelligence and militarism—without which 9/11 cannot be understood. In reality, 9/11 and the resulting "War on Terror" are parts of a massive authoritarian response to an emerging economic crisis of unprecedented scale. Peak Oil—the beginning of the end for our industrial civilization—is driving the elites of American power to implement unthinkably

Multidisciplinary perspectives to governance of oil in African countries Large quantities of oil were discovered in the Albertine Rift Valley in Western Uganda in 2006. The sound management of these oil resources and revenues is undoubtedly one of the key public policy challenges for Uganda as it is for other African countries with large oil and/or gas endowments. With oil expected to start

flowing in 2021, the current book analyses how this East African country is preparing for the challenge of effectively, efficiently, and transparently managing its oil sector and resources. Adopting a multidisciplinary, comprehensive, and comparative approach, the book identifies a broad scope of issues that need to be addressed in order for Uganda to realise the full potential of its oil wealth for national economic transformation. Predominantly grounded in local scholarship and including chapters drawing on the experiences of Nigeria, Ghana, and Kenya, the book blazes a

oil factor into end-time global alignments and how they may lead to a dramatic shift in the balance of power in the world. Much of the world's oil is in the custody of unstable and sometimes hostile regimes. Nations around the world are positioning themselves to protect their shrinking piece of the pie of dwindling oil reserves. Global tensions continue to rise. In *The Coming Oil Storm* Rhodes documents the role of Islam as the religion in control of most of the world's oil reserves and shows convincingly that once Muslims are in possession of the two swords of oil and nuclear weapons, they will feel
