"This book highlights areas of concern in management of intellectual capital and demonstrates opportunities for the successful use of these tactics"--Provided by publisher.

"This multi-volume reference examines critical issues and emerging trends in global business, with topics ranging from managing new information technology in global business operations to ethics and communication strategies"--Provided by publisher.

Knowledge Cities are cities that possess an economy driven by high value-added exports created through research, technology, and brainpower. In other words, these are cities in which both the private and the public sectors value knowledge, nurture knowledge, spend money on supporting knowledge dissemination and discovery (ie learning and innovation) and harness knowledge to create products and services that add value and create wealth. Currently there are 65 urban development programs worldwide formally designated as “knowledge cities.” Knowledge-based cities fall under a new area of academic research entitled Knowledge-Based Development, which brings together research in urban development and urban studies and planning with knowledge management and intellectual capital. In this book, Francisco Javier Carillo of the Monterrey Institute of Technology (ITESM) brings together a group of distinguished scholars to outline the theory, development, and realities of knowledge cities. Based on knowledge-based development, the book shows how knowledge can be and is placed at the center of city planning and economic development to enable knowledge flows and innovation to provide a sustainable environment for high value-added products and services.

Includes entries for maps and atlases.

This book focuses on Integrated Reporting as a contemporary social and managerial innovation where a number of initiatives, organizations and individuals began to converge in response to the need for a consistent, collaborative and internationally accepted approach to redesign corporate reporting. Integrated Reporting is a process that results in communication of the annual “integrated report” which describes value creation over time. An integrated report is a concise communication about how an organization’s strategy, governance, performance and prospects lead to the creation of value over the short, medium and long term. This book offers a fresh perspective with expert contributions focusing on both the theoretical underpinnings and the practical challenges for the future of corporate reporting.

Why are the Dallas Cowboys, once revered as "America's Team," now so often reviled and the subject of controversy? The Law of Magnetism makes it clear.

Management and Entrepreneurship provides a complete overview of managerial decision-making responsibilities and the role played by entrepreneurship in developing an organization. Starting with the definition of management, the various facets of managerial roles and a broad account of the history of development of management thought, the book provides in-depth discussions on the nature, importance, and purpose of planning. It elaborates further on the importance of organizing and staffing, and directing and controlling. The discussion moves on to introduce the concept of entrepreneurship as a business development tool. Special emphasis is placed on entrepreneurship in the Indian environment with detailed discussions on the development of small-scale industry, the role of institutional support, and the importance of preparation of projects for entrepreneurial ventures. The book lays emphasis on simplified definitions and point-wise presentation of theoretical concepts. By adopting an application-oriented approach, it also provides numerous real-life examples, vivid illustrations, and inspirational case studies which play the dual role of explaining concepts as well as instilling entrepreneurial zeal in students.

This manual is specially written for Students who are interested in understanding Structured Query Language and PL-SQL concepts in the Computer Engineering and Information technology field and wants to gain enhance knowledge about power of SQL Language in Relational Database Management System Development.
