George Patton is renowned for his daring tank thrusts and rapid movement, but the many rivers and obstacles his Third Army encountered crossing Europe required engineers spearheading his advance. A Combat Engineer with Patton ' s Army is the untold story of Frank Lembo, one of Patton ' s men who helped move the American command in the battle of Argentan in the Normandy Campaign, in the high-speed pursuit of the German Wehrmacht eastward across France, and in the brutal battles waged during the Battle of the Bulge and during the final combats along the borders of the collapsing Reich. Throughout his time in Europe Lembo maintained a running commentary of his experiences with Betty Craig, his fiancé and future wife. This extensive correspondence provides a unique eyewitness view of the life and work of a combat engineer under wartime conditions. As a squad (and later platoon) leader, Frank and his comrades cleared mines, conducted reconnaissance behind enemy lines, built bridges, and performed other tasks necessary to support the movement of the 317th,

Online Library Where Are Army Combat Engineers Stationed

318th, and 319th Infantry Regiments of the Blue Ridge Division—Patton ' s workhorses, if not his glamour boys. Frank wrote about the deadly river crossings at the Moselle, Seille, and Sauer, all under enemy fire, and of the frustrating pauses when supplies were diverted. He participated in the mid-December sprint to Luxembourg and the relief provided at Bastogne during the Bulge, the liberation of concentration camps once Third Army had charged into Germany, and of their occupation duty in Bavaria. Frank ' s letters go beyond his direct combat experiences to include the camaraderie among the GIs, living conditions, weather, and the hijinks that helped keep the constant threat of death at bay. His letters also worked to reassure Betty with hopeful dreams for their future together. Including dozens of previously unpublished photographs, *A Combat Engineer with Patton ' s Army: The Fight Across Europe with the 80th " Blue Ridge " Division in World War II* offers the rare perspective of what day-to-day warfare at the ground-level looked like in the European Theater through the eyes of one of the men spearheading the advance.

At its peak in World War II, the United States Army contained over 700 engineer battalions, along with numerous independent brigades and regiments. The specialized soldiers of the Engineers were tasked with a wide variety of crucially important tasks including river bridging, camouflage, airfield construction, and water and petroleum supply. However, despite their important support roles, the engineers were often employed on the front lines fighting beside the general infantry in the desperate battles of the European theatre. This book covers the role of these soldiers, from their recruitment and training, through their various support missions and combat experiences, forming an account of what it was truly like to be a combat engineer in World War II.

The struggle for armored dominance sometimes overshadows the vital and unsung heroes of the battlefield: the engineers. Combat engineer vehicles spearhead armored attacks, breach obstacles, and prepare defenses. Born of necessity, these amazing vehicles have developed from humble beginnings to technological and mechanical marvels. After a slow and unimaginative start, the US Army has developed and fielded some of the most prolific and advanced combat engineer vehicles ever used. This book provides a rare look at these amazing machines and the crews that operated them. Vehicles covered are the M728 Combat Engineer Vehicle; Armored Vehicle Launched Bridge; M9 Armored Combat Earthmover; M9 ACE and M60 AVLB; M1132 Stryker Engineer Squad Vehicle; M2 Bradley, Wolverine, and Assault Breaching Vehicle; and Grizzly and Panther 2, as well as experimental and limited-use vehicles. Along with providing technical information, author Jeffrey DeRosa analyzes the operational effectiveness of each vehicle.

Presents professional information designed to keep Army engineers informed of current and emerging developments within their areas of expertise for the purpose of enhancing their professional development. Articles cover engineer training, doctrine, operations, strategy, equipment, history, and other areas of interest to the engineering community.
