- Writing Formulas and

Names Introduction

Most of the chemical
reactivity of an element

is determined by the

File Type PDF

Writing

valence electrons, which are the electrons in the highest energy level.

Usually in a compound, each atom has an octet of electrons in each of the valence shells.

chemical formulas for the compounds in each box. The names are found by finding the intersection between the cations and anions.

Example: The first box is the intersection between the “zinc” cation and the “chloride” anion, so you should write “ZnCl₂”, as shown.
